

indicates that existing Stop & Shop fueling facilities generate an average of 430 customers per day (860 vehicle trips total), of which less than 60 vehicle-trips would be categorized as new trips.

Truck generation for the fueling facility will include deliveries by WB-50 type vehicles approximately 3 times per week, based on actual experience at currently operational Stop & Shop Gas facilities.

#### Conclusions

The proposed fueling facility represents a low generator of new traffic, and is not expected to result in any noticeable change in traffic operations at nearby intersections.
